Abstract **7**

I The Instrument 13

1 Optical Polarimetry in Astronomy **14**

1.1 A brief historical introduction 14

1.2 Polarimetric techniques 16

1.2.1 Single aperture polarimetry 16

1.2.2 Imaging polarimetry 17

2 IMPOL–Design and Construction **19**

2.1 Scientific Goals and Technical Guidelines 19

2.2 Optical principle of the instrument 20

2.3 On the optical bench 24

2.3.1 The half-wave plate (HWP) 24

2.3.2 The Wollaston prism 25

2.3.3 The camera lens 26

2.3.4 Full assembly tests 28

2.4 Mechanical structure 30

2.5 Electronics 35

2.5.1 Instrument control 35

2.5.2 Image acquisition 38
2.6 Software 39
2.6.1 Instrument control 41
2.6.2 Image acquisition 43

3 Measurement of Polarization **45**
3.1 Sources of measurement errors 45
3.1.1 Atmospheric effects 45
3.1.2 Distortions in polarization within the instrument 46
3.1.3 Flat field errors 47
3.1.4 Photon noise 48
3.1.5 Performance of Polarimeter 50
3.2 Data-analysis 51
3.2.1 A few important considerations during data-analysis 51

4 The Acquisition and Guidance (A&G) System **55**
4.1 Design guidelines 55
4.1.1 Techniques for A&G systems 56
4.1.2 Performance demands 56
4.2 Implementation of the A&G system 57
4.3 Assembling and Testing 58
4.3.1 Opto-mechanical hardware 59
4.3.2 Electronics 61
4.3.3 Software 62
4.4 Performance Estimate 64

5 Commissioning the Instrument **67**
5.1 Phase I - The Laboratory Tests 67
5.1.1 CCD camera characteristics 67
5.1.2 Characterization of the optics 70
5.2 Phase II - Tests on the telescope 73

II Observations **76**

6 Wideband Imaging Polarimetry of Field Stars Behind Bok Globules **77**

6.1 Introduction 77
6.2 Observations 78
6.2.1 The Data 79
6.3 Results 81
6.4 Discussion 91
6.4.1 Geometry of the magnetic fields 91
6.4.2 Effect of/on magnetic fields on/of globules 95

7 Magnetic Fields in Nearby Molecular Clouds **100**

7.1 Cometary Globules 100
7.1.1 Observations and Results 101
7.1.2 Discussion 104
7.2 Filamentary Clouds 106
7.2.1 Observation and Results 107
7.2.2 Discussion 109

A Representation of Polarized Light **111**

A.1 The Stoke's parameters 111

B Polarized Light in Astronomy **114**

B.1 Introduction 114
B.2 Polarization at the source 115
B.2.1 Synchrotron Radiation 115
B.2.2 Masers and Zeeman effect 116
B.3 Effects of the propagating medium 117
B.3.1 Absorption and Retardance 117
B.3.2 Scattering 119

C Polarization Sensitive Optical Elements **125**

C.1 Dichroism and Birefringence 125
C.1.1 Half-wave plate 126

C.1.2 Wollaston Prism 127
C.2 Mueller matrices 128

D Observing with IMPOL **130**
D.1 Homework 130
D.2 At the observatory 132
D.2.1 Mounting the instrument 132
D.2.2 Other preparations 134
D.2.3 Observing 136
D.3 Data reduction 144

E Observing with IMPOL - README **147**
E.1 Homework 147
E.2 At the observatory 149
E.2.3 Observing 149
E.3 Data reduction 155
