

# AGN and ASTROSAT A Few Thoughts

G Stewart  
University of Leicester

# Timing (and Broadband) is Everthing

Astrosat must find a niche  
New Science

Astrosat must compete  
Do few (new?) Objects well

Use Unique Capabilities  
- Broad-band Photometric Spectroscopy

## Some “Ideas” ?

### Disc Astrophysics

- Coronal Temperature - Reflection
- The Big Blue-Bump - Soft Excess Connection
- What drives variability

### AGN Environment

- Reddening and Gas Absorption

### Jet Physics

- SSC missing link (with HESS2?)
